

The 1260V2 is the next generation of photopolymer processor. We have taken the market proven heavy throughput FLP1260 and made a great product even better. By redesigning the developer section we have been able to achieve faster processing speeds, linked with the ability to process the highest quality CTP photopolymer plates available.

The 1260V2 is built with operators in mind, whilst offering trouble free processing. The unit has many unique features including colour coded pipework and ease of access to all major serviceable parts such as pumps, motors and filters. The 1260V2 is equipped with a heavy duty chain drive system which adds to the renowned durability expected of a product manufactured by HEIGHTS.

The 1260V2 can deliver an impressive 60 B1 high quality plates per hour to the demanding commercial customer. The unit can be configured for online and offline production, and is capable of coupling to a wide range of plate-setters through our mechanical and electronic interface.
