

DLF SYSTEMS

The HEIGHTS range of combination Dryer Light Finisher Systems have been designed to produce the highest quality flexo plates in combination with the entire HEIGHTS range.

Available in two sizes (2000 DLF and 3000 DLF), the DLF Systems are engineered to the highest standards to meet the requirement of continuous, heavy duty plate production on both analogue and digital solvent wash plates.

The Units are equipped with three sets of two dryer drawers, each with their own adjustable timer, tangential fan and heater assembly to ensure even drying temperatures and consistent airflow throughout the unit. The drying temperature is constantly monitored via the PLC to ensure that the dryer temperature is kept between correct plate production parameters, as are all the DLF functions.

The LF section has a single drawer, combination light source using highly efficient UV-A and UV-C lamps to ensure post exposure and finishing is uniform across the plate surface.

IN SUMMARY:

- ◀ Six Drawer Dryer System
- ◀ Singler Drawer LF System
- ◀ Touchscreen PLC
- ◀ Adjustable timers
- ◀ Highly efficient drying system
- ◀ Combination UV-A and UV-C light source
- ◀ Built-in extraction
- ◀ Durable and robust, quality engineering
- ◀ 12 months parts warranty
